The Nugget Is California's Leading Mining Weekly

Nevada City Nugget

VOL. VI, NO. 38 | The GOLD Center | NEVADA CITY, CALIFORNIA | The County Seat Paper | FRIDAY, JULY 29, 1932

SIERRA WAY PLAN CONTEMPLATES SCENIC HIGHWAY

The plan for the Sierra-Way, 800 mile scenic highway in the Sierra-Nevada mountains, moved a step nearer realization recently with the inclusion of its routing in the park-to-park highway project by federal road officials.

About a year ago the Nugget carried an article stating it would be a reality.

Congressman Harry L. Englebright was instrumental in the "putting over" of this immense project on the occasion of the visit of the congressional committee to California last fall. He pointed out the wonderful possibilities of this road and one of the strongest points in its favor was that the largest part was already under either state or federal control.

National parks along the route include Mount Lassen, Tahoe, Yosemite, General Grant and Sequoia. The noted peaks are Mt. Shasta, Mt. Lassen and Mt. Whitney. Famous lakes include Almanor, Tahoe, Donner, Bass, Shaver and Huntington, reached by a side road. The route crosses such streams as the Feather river, North, Middle and South Yuba rivers, Truckeet, Stanislaus, Tuolumne, San Joaquin, Kings, Waweah and Kern. State parks include the McArthur Memorial and Calaveras Big Tree grove.

The road will touch or make easily accessible most of the outstanding scenic features of the Sierra. Leaving U. S. Highway 99, known also as the Golden State Highway, at the base of Mt. Shasta, snow-clad sentinel of Northern California, the project will pass through a region of virgin timber. It will wind through forest country to the shore of Lake Britten and cross the Pit river on a huge concrete dam. Burney Falls in the McArthur State Park is nearby. The route then enters an area devastated by molten lava that flowed from Lassen during a comparatively recent eruption of the volcano.

Mt. Lassen Volcanic National Park is then crossed by a road partly circling the base of the now inactive volcano and rising to an elevation of 8,000 feet. Lake Almanor is the next scenic feature as the route goes southward through Feather river country. The newly completed road between Sierra City and Downieville will be a link of the road crossing the North, Middle and South Yuba rivers. In the Nevada county section it traverses the district of old mining towns and the country made famous by Bret Harte and Mark Twain in their writings.

It passes the beautiful Donner Lake, with its interesting, though tragic, history and along the Truckee river to the picturesque deep blue Lake Tahoe.

After paralleling the lake for 25 miles the road goes through the fertile and productive Carson Valley with its memories of the Comstock Lode at nearby Virginia City, Nev. Climbing over Tioga pass at an elevation of 10,000 feet, the Sierra-Way enters Yosemite valley, ascends the Wawona grade and proceeds past Bass Lake, Kerckhoff Lake, Auberry and Dinkey to the Kings river above Balch Camp. From this point an expensive link ultimately will connect with General Grant Park and the new Kings River canyon highway now under construction. The route continues on through Grant and Sequoia parks and possibly via Hockett Meadows to Balch Camp, Nelson and Isabella.

The national parks service is definitely committed to the park-to-park highways, the state highway commission is expending millions of dollars in the Kings River canyon and elsewhere and various counties are providing road links out of which the Sierra-Way will materialize in the not distant future.

The Sierra-Way can be traveled for most of the distance now and lacks only a few vital links from being complete.

This project which will give California a scenic mountain highway that will take its place in history as one of the world's most famous motorways is located almost entirely within the national forests of California near the crest of the Sierra-Nevada mountains, the last and most formidable barrier encountered by the nation's hardy pioneers in their westerly trek in quest of gold and adventure. The spirit of Kit Carson, John C. Fremont, the Donner party and picturesque miners and immigrants pervades the atmosphere and depicts a good part of the romantic and colorful history of the state.

The road will be more than 800 miles long, extending the entire length of the Sierra-Nevadas. Practically the entire route may be traveled now by automobile. Some detours are necessary. Although nearly all the route is included in approved major road systems, about 35 per cent of it has not yet been improvey beyond the stage of low standard roads required for administering and protecting the national forests. About 50 per cent of the route has been constructed to current major highway standards, and the remaining 15 per cent is being constructed with national forest road money, and with state, county and national parks service funds.

In going over this road during the summer the traveler will escape the heat of the Sacramento and San Joaquin valleys.

Bullion Group of Mines May Reopen Soon

The Bullion group of mines and claims a mile south of Grass Valley and consolidated territory held under option to the extent of some 2,000 acres is expected to see active development within a few weeks. Plans for reopening the Bullion shaft have been underway for several months by the Bullion Consolidated, Inc., a Nevada corporation.

The Bullion shaft, closed for many years, is located directly on the Auburn highway and should the property come into large operations it is expected to become of much sight-seeing interest to travelers.

YUBA RIVER COUNTRY

Yuba River Canyon

The old 49'er town of Washington occupies one of the most picturesque spots in the Yuba River canyon country. East of Grass Valley-Nevada City on the Tahoe-Ukiah highway, already famous for its long straight sweeps through walls of tremendous pines, is Washington Junction. A country road leads from there past the U. S. Forest Service ranger station down the canyon sides into the town of Washington. At its entrance are great piles of immense granite boulders that were bellied up by the Chinese miners of long ago, who moved them from the and piled them many feet high. If the energy that was required to move and lift these heavy boulders could have been translated into horsepower and sold by a power company a revenue might have been obtained equal to the gold that was recovered. There are still many evidences of the early Chinese miners, such as a gate covered with Chinese characters that leads to the homes they formerly occupied.

Across the river on the county bridge a road leads up stream past hundreds of picnic and camp spots, where there are many swimming holes amidst surroundings of the water comes tumbling out of the canyon walls and helps to fill the stream with its crystal clear, bluish green water. Although this road is bumpy and to be traveled slowly its scenic value makes it well worth the trip. It stops at the Eagle Bird mine where the canyon seems suddenly to end in a sky reaching sheer cliff across the face of which water from a thousand springs glistens in the sunlight.

Another road from the Washington bridge leads up to Graniteville. As it winds out of the deep canyon, it affords many breath-taking views of the river far below and the Sierra Peaks beyond. And when the top of the ridge is reached it passes between the massive trunks of age-old pines that have withstood the lightning and the storms for centuries. This beautiful forest road then joins the Bowman Lake road.

Near the bridge a branch road turns off to the Spanish mine which is about three miles above Washington. In 1850, Patrick Dillon came from New York and in '51 he was mining gravel on Poorman's creek, which was so named because a miner who could not make high wages from the stream was a very "poor man." In '96 Dillon located the present Spanish mine on the day that Bryan was first nominated. As a result he called it the Sixteen-to-One. Later he sold out to Egan, Chas. Blist, and Hale Brothers of Sacramento, who changed it to the Spanish Ledge. They, however, lost the mine which was located again by Mike Crowley, who about 1927 sold it to Fred W. Bradley for $250. When Bradley left college—a quarter of a century ago—he worked at the Eagle Bird. A year or two later the old Spanish mine, located just above the present Spanish mine, failed to pay its employes and Bradley told the court he would take it over and pay off the back wages out of the profits. His efficiency was so great that his statements submitted to the court, which are still on record in the reports issued at that time by the state mining bureau, show his mining and milling cost to have been but 41 cents a ton. It was then that one of the world's greatest mining operators, John Hayes Hammond, dropped into Washington to examine some mines in the district. When he heard the report that a young engineer by the name of Bradley was mining and milling ore for 41 cents a ton he smiled. But the reports were so persistent he decided to look into the matter. When he saw the actual record he at once hired Bradley and made him superintendent of the Bunker Hill and Sullivan mine in Idaho. Mr. Bradley is today the managing director and a heavy owner in the Bunker Hill and Sullivan, the Alaska-Juneau and many other mines, and is one of the world's greatest mining operators and engineers. The present Spanish mine is managed by his son, Jim, and here is erected an experimental plant in which a number of different metals are being recovered by the increasingly popular flotation method.

DEADWOOD MINES IN SISKIYOU ARE OPERATING

The Deadwood mining properties in Siskiyou county are proving themselves one of the best in the county at the present time. A large shipment made last week brought $19.07 per ounce. New openings are being made, and the mill is averaging 50 tons daily on ore running about $15. H. C. Baker is principal owner.

MINING PROPERTY IS TO BE DEVELOPED

One of the largest deals to take place in the Sierra City district for some time was the transfer by bond and lease of the Big Avalanche group of quartz mines, comprising 21 claims; the Roman group of 28 claims, and the Northern Bell and Lucky Boy.

G. W. Layton of Oakland is the operator, who plans to install a new type test stamp mill capable of handling from 15 to 20 tons of ore a day. The stamps drop with great rapidity, having a speed ranging from 150 to 240 times a minute.

Work of cleaning out the tunnels, building a bridge across the river, constructing roads, installing a compressor, jack hammers and other machinery and blocking out ore is progressing satisfactorily, according to Mr. Layton.

A crew of ten men is employed on the property.

DIADEM MINE TO START TAKING OUT ORE SOON

Superintendent Whitman Symmes has three men at work at the Diadem mine at Forest cleaning out the incline shaft preparatory to developing that property and placing it on production.

Sixty feet of the 80-foot shaft connecting with the drain tunnel has been cleaned out and when the bottom is reached, mining operations on the three-foot ledge will begin. The ledge contains good ore and as soon as conditions warrant a mill for the reduction of ore will be erected, Mr. Symmes stated.

GOLD BASIN MINE IS BETTER WITH DEPTH

By Jo P. Carroll

Work at the new prospect shaft on the Gold Basin properties, adjoining the Black Hawk mine, of the Randsburg Gold Company continues to show improved values as additional depth is made. The properties are in the Rand district.

Albert A. Turner and Raymond S. Kidder, consulting engineers, retained by the company to take charge following their report on the properties, are giving their personal supervision to the development, and are maintaining headquarters at Randsburg.

At 28 feet the vein, some five feet in width, took a dip of 57 degrees wtih a sharply defined footwall but with no appreciable change in width.

Beginning at the 40 foot depth, a distinct alteration has taken effect in wall rocks adjacent to the vein proper. The alteration is of a talcose consistency and carries values in gold.

The mineralized streak which has been followed on the footwall side of the vein from the surface now has a width of approximately 20 inches at 50 feet. Mineralized values are found the full width of the shaft.

Indications are such that it seems highly probable a drift to the east will be started from 60 foot depth on the incline to contact a second lead striking north and south 50 feet east of the new shaft.

TAHOE-UKIAH HIGHWAY CONTRACT AWARDED

The State Department of Public Works opened bids Wednesday for highway work in Nevada county. A. Tiechert & Son of Sacrament, was low bidder with an offer of $30,978 for surfacing with untreated crushed gravel and bituminus, covering 11.7 miles of the Tahoe-Ukiah highway between Nevada City and Washington Junction . The work will be completed on one side of the roadway at one time and when finished the other side will be treated.

Camptonville Gravel Property Is Leased

Mrs. A. Martignone has leased part of her property adjacent to Willow Creek to William Burns and associates. The property is said to contain considerable gravel.

Three Counties Combine in Southern California Fair

An invitation has been received by the board of supervisors of Nevada county from J. M. Paige, superintendent of the agricultural department to enter an exhibit in the eleventh annual Los Angeles County fair at Pomona, September 16-25. The exposition will be presented for the first time this year as a great tri-counties event following the action of Riverside and Orange counties in joining with Los Angeles county in the presentation of a gigantic harvest festival worthy of the Olympic year in California. With the Olympiad it will be one or the two major events for the latter part of 1932 in the southland, and will be the only large fair south of San Francisco this year.

Editor Visits City—

E. L. Platz, city editor of the Northern Idaho News, Sandpoint Idaho, visited Nevada City Wednesday and spent some time visiting at the Nugget office. He stated that he had made the trip to Nevada City to see for himself the country and city of which Bret Harte wrote.

PRESERVE GHOST TOWN TO FUTURE GENERATIONS

Historical societies of Superior California and other organizations or persons interested in preserving a "ghost town" of the gold mining days of '49 by having the state include such a town in the state park system, have very little time left.

State Director of Natural Resources Dan H. Blood states that only $117,832 of the $6,126,412 the state had in its park fund remains unallocated. The remaining $6,008,579 has already been committed to or spent on projects in different parts of the state.

Of the $117,832 unallocated, only $30,735 can be used for the acquisition of state park property in the northern geographical half of the state.

To date the state has actually spent $4,470,447 for state parks, matching private donations totaling an equal amount. In addition, approximately one and one-half million dollars have been promised for certain sites.

There is a possibility that some of the proposed park sites may not be taken into the park system ,due to inability of their backers to obtain private donations equal to the money that would be put up by the state. If this happens the money so set aside will be available for reallocation.

The purchase of the "ghost" mining town of Columbia, Tuolumne county, cited as one of the best preserved of the old camps, was strongly recommended in an official survey of possible sites for the park system.

No money has been set aside by the state park commission for the purchase of such a monument to California pioneers as yet, however, because no private funds to match state funds for such a site have been proffered.

Blood said the state park system, one of the most diversified in the world, is worth at least $12,000,000 as it now stands. When the present fund is used up, the state parks will have a combined value of about $15,000,000.

Very little has been said about the preserving of a "ghost town," but it seems that some effort should be made in this district to preserve an old town made famous by Bret Harte or Mark Twain as these famous men have made this section of the Mother Lode renowned the world over.

It is through the efforts of our local Native Sons and Native Daughters that many old landmarks are preserved and markers designate other spots of historical interest. Among them are the Wells Fargo building at Timbuctoo near Smartsville, the Lone Grave above Nevada, the Donner Monument at Donner Lake and the quartz marker at Grass Valley which designates the first discovery of gold found in quartz rock.

HUGHES PROPERTY TO BE PUT INTO OPERATION

One of the recent mine deals to take place in Downieville is the bond and lease obtained on the Hughes property by J. J. Gude and associates of Los Angeles. Included in the deal are four claims belonging to J. R. and H. J. Stark of Downieville, making eight claims altogether.

Work of cleaning out the tunnels, retimbering and laying track is under way with a crew of four men. As soon as this is completed, development work on the property will begin.

WOMAN MINER GETS SILVER IN PAN INSTEAD OF GOLD

While panning on the East Fork several miles above Downieville recently Mrs. D. C. Matison found a silver dine instead of a nugget. The coin, which is quite worn, bears the date 1816.

This stream was worked quite thoroughly in earlier times, first by the white miners and later by the horse of Chinese. Downieville is said to have had a Chinese population of 1500 at one time. The old coin may have belonged to some hoarding Oriental, or it may have been lost by a '49er.

At any rate, Mrs. Mathison is the first miner, male or female, who ever panned silver from a stream in this state, and she is very proud of her feat.

PARAGON MINE SOLD

Rumor has it that the Paragon mine at Bath has been sold by J. F. Thompson to a New York company, headed by Rockefeller and Westinghouse people. The price is said to be $100,000.—Placerville Herald.

ONE WAY TO MINE

Mrs. Chalie Yue has the best system when it comes to mining. She raises ducks and lets them run in the ravine near her home. When she kills one for supper she generally finds enough gold to pay for all the supper trimmings. She killed one recently that had never been in the ravine but had spent its life locked up in the yard. In its gizzard she found a lot of black sand and a pretty little nugget of pure gold. Last year one duck produced a nugget large enough for a stickpin.

Miss Alice Murchie Is Building New Home

Miss Alice Murchie, who has been employed by the Pacific Telephone & Telegraph Company here for several years, is having a new home built on her property on Broad street.

The house will consist of five rooms and will be of frame construction with several innovations in construction.

The materials were furnished by the Nevada County Lumber Company. Fred Tredinnick & Stephens are the contractors.

E. Schrieber has recently has his cafe re-roofed with composition shingles. Leroy Moulton and Lee Day did the work.

Mr. and Mrs. Baptiste Toccalini are erecting a neat two-car garage on their property on Prospect Hill. To the back of the building and over looking the town, there is to be a large room which is to be occupied as living quarters.

MINING INTEREST TO BE REVIVED AT STATE FAIR

Discovery of gold depohits near Lake Tahoe and the revival of gold mining all over the state have proved an incentive to mining men of California to plan exhibits for the 78th annual state fair in Sacramento, September 3-10.

The Golden State's output of gold has been vast in the period since its discovery in 1848; yet many persons fail to realize that mining of the yellow metal has taken on an added lease of life since other nations have gone off the gold standard, thus creating a greated demand for the precious mineral .

The state fair offers this year total cash awards of $1,227 for the best displays in the mineral and mining department. Extent of the state's varied mineral production is indicated in the awards offered for placer and lode gold, copper, lead, silver, iron, quicksilver, tungsten and other metallic ores.

Cut and uncut precious stones will be shown as will displays of borax ores and common and rock salt. Few persons realize the extent of the common salt industry in California where the table product is evaporated from ocean water, principally in the Monterey district.

There will be extensive displays, also, of petroleum and petroleum products and asphalt as well as cement, slate, limestone, marble, granite, dressed stone, onyx marble, clay and clay products.

4-FOOT VEIN STRUCK NEAR HIGHGRADE

Perseverance of William D. Broaddus, who for 20 years has persistently continued development of what is known as the "Klondike" mining claims in the Highgrade district, north of Ft. Bidwell, may at last have borne fruit.

Broaddus recently has bared a 4-foot vein at the end of Klondike claim No. 1 which cross-face assays have shown bears gold to the value of $34 per ton. He is now at work on the vein and has reason to believe it extends no mean distance across his property.

Over the hill from the Klondike the Big Four property is being put into shape by William Nance who expects a number of capitalists soon to inspect the workings.

Activity at Willow Ranch continues at the recent strike there but no announcements of any new developments is forthcoming.

At Hayden Hill miners are still at work developing the property controlled by A. K. Wylie.

MINING NOTES FROM PLACER COUNTY

It is learned on authoritatiive information that the Phelps mine near Colfax has changed hands and will soon be operating.

The Black Oak mine near New England Mills is now producing. The tunnel has been retimbered and the mill is operating.

Rumor has it that Harry Werner, who operates a mine on the Pike Bell road, is erecting a mill which will be used in milling the ore taken from his property in that section.

JACK COLLINS UNCOVERS GOLD COIN OF EARLY DATE

Jack E. Collins, world war veteran, who is living at the camp ground, while prospecting, one day this week near town came upon the remains of an old fireplace, remnant of an early-day cabin.

He tried a pan of dirt out of the fireplace and was surprised to wash out a California gold dollar, minted in San Francisco in 1852. Further operations failed to produce anything else of value.—Trinity Journal.

First Fire of Season—

The first fire of serious consequences this season in the Tahoe National forest occurred Monday. It was between Carson City and Glenbrook over the Nevada state line. Men Ffrom Nevada were called out on the fire and later reinforcements were sent out from Truckee and Nevada City. It burned over about 400 acres of timber before being brought under control. Owing to the heavy rainfall of last winter there has been very few fires anywhere in this section up to the present time. Last year thousands of acres of land were burned over.

NEVADA COUNTY LEADS STATE IN GOLD FIGURES

Nevada county led the state of California in 1931 in the value of the output of precious metal.

With 63 mines in operation Nevada county produced 159,870.40 fine ounces of gold. Silver, copper and zinc also were produced. The total value of these metals was $3,374,940.

Because of her dredger operations Sacramento county usually leads the state in gold production. The revival of lode and placer mining in Nevada county, however, has placed this area far in the lead. Many of Nevada county's "old standbys" are continuing in rich production and in addition to several new smaller mines, several of the older mines that had been inactive are again producing. Some of the latter are in rich ore.

Sacramento county in second place had 20 mines operating and produced 90,519.04 fine ounces of gold and 3,641 fine ounces of silves with a total value of $1,872,251.

Amador county, with the deep Mother Lode mines, was in third place during 1931. Amador had 35 mines in operation. Metals produced were worth $1,553,856.

Plumas county was close behind. With 36 mines producing, contributing $1,535,222 to the nation"s new wealth.

Other counties' production is as follows:

Yuba	$992,946
Sierra	653,615
Shasta	362,129
Trinity	292,563
Butte	173,113
Calaveras	153,938
El Dorado	85,605
Tuolumne	78,082
Siskiyou	74,495
Placer	72,686
Humboldt	2,683
Modoc	295

YOUNG AMERICA MINE BEGINS OPERATIONE

According to Whitman Symmes, San Francisco mining man, who has obtained an option on the Young America property in the Sierra City district, that mine may again take its place among the producers of Sierra county.

This was once a very rich property which made its owners wealthy, but which has not been operated during recent years except for some exploration work in search of the ledge that was lost during former operations.

Mr. Symmes believes he can pick up the lost ledge again and with this expectation has obtained an option on the property.

MINING JUBILEE IS PLANNED AT PORTOLA

A mining jubilee is planned for August 14 at Johnsville by the Plumas county chapter of the California Mining Association. Invitations have been extended to Governor Rolph, Congressman Englebright and Errol MacBoyle, president of the htate association, to attend the festivities.

A miniature ten-stamp mill now is being assembled by Ned Richards for the occasion and Steve Pezzola is working on an arrastra—one of those primitive but marvelous stone mills which once lined the streams of the Mother Lode country—to haveit on display also.

Alleghany Roads Are In Fair Condition

The following news item will be welcome to the many hunters and fishermen who enjoy getting back where there is a chance of securing their limits of deer or fish.

The road from North San Juan to Alleghany is in fair condition, the roadbed not being cut deep and is fairly smooth though quite dusty. From Alleghany to Forest and Goodyears Bar the road is rough in places and slightly dusty though a good mountain road. The road from Nevada City to Alleghany by way of North Columbia is fair, but narrow and winding with steep grades.

CREWS ADDED

According to [illegible] ten engine crew[illegible] during the p[illegible] ern Pacif[illegible] eight [illegible] things are [illegible] way.

"BLUE DOCTORS" TO GIVE DANCES AT LA MAR MEADOW[illegible]

The "Blue Doctors," well known dance orchestra, will open a series of dances at La Mar Meadows, two miles south of Grass Valley on the Auburn highway. The series will open Sunday afternoon and dancing will be enjoyed until late. The popular plan of five-cent dances will be in vogue and admission to the pavilion will be free.

She: "We're going to give the bride a shower."

He: "Count me in. I'll bring the soap."

Sacramento Printer Dies—

Harry C De Ahna, linotype operator on the Sacramento Union, died at the Nevada City Sanitarium Friday evening He had moved to the Will Davis home in Willow Valley from Sacramento, hoping it would benefit his health. He is survived by his devoted wife. He was a member of the Sacramento Typographical Union and had been a member of that organization for many years. Burial was in Sacramento. Mr. De Ahna had visited in this section on several occasions and was well liked by the friends he made. He was a native of New York but had lived in California 25 years, much of this time being spent in the employ of the Sacramento Union and Sacramento Bee.

AS SMOKE GOES UP BUSINESS GOES DOWN, A DRAMA

(Dramatic Tabloid with a Moral)

Scene—Section of a business block in a small town situated in one of California's' popular resort and vacation areas. A gasoline service station is seen at the corner. Adjoining it is a garage and next a tourist hotel. Road signs indicate that the street is part of a main highway. The time is mid-afternoon, but the light of the sun is obscured by a smoky haze which seems to rise from wooded foothills in the background. Three men stand idly in a group at the curb. They are gazing gloomily at each other. From their conversation they are identified as the service station owner, the garage man, and the hotel proprietor.

The Service Station Man (bitterly)—I might as well leave the wife on the job and go fishing. There won"t be much business at these pumps of mine today—or tomorrow—or the rest of the week. That forest fire has driven travel away from these diggin's just as if it were the plague.

The Garage Man—They always do. I haven"t sold even a spark plug since the fire started on the other side of the ridge yesterday afternoon. There isn't' a chance of its coming even close to this town, but just the sight of smoke far away seems to scare these touring folks out of their skins.

The Hotel Proprietor—I had a full house and was turning people away, but last night my place was darn near empty. They checked out in droves—wouldn't listen when I told them there was nothing to worry about. The worst of it is there won"t be any crowds this way again till long after the fire is out. Just as the season was getting good, too. A few more fires and we'll all go broke.

The Service Station Man—When smoke goes up, business goes down.

The Garage Man—You surely said a mouthful.

The Hotel Proprietor—T r u e r words were never spoken.

(Curtain)

The Effect of Fires on Travel

The little dialogue above is far from being purely imaginary. It is based on actual facts brought out by studies of how business fares when the smoke of a forest fire darkens the sky. Recreational travel and forest fires will not mix. Forest fires destroy scenic assets and natural resources and endanger life and property. This makes them bad enough. But forest fires also cut directly and heavily into the business of those who look to the tourist dollar and the vacationist dollar for their revenues. Travel recoils at the most distant sign of a fire. Consequently, the effect is felt even at points remote from the immediate vicinity. It is felt in the shape of lessened trade for every business that caters to the motor traveler. Indirectly, every other business in the locality is affected.

With California on the threshold of another forest fire "season," a new spirit of vigilance is being implanted. In particular, a sterner attitude is being aroused toward the incendiary who deliberately sets fire to field or forest, either through malice or for personal advantage. Federal, state and county forces stand ready to hold the fire toll to a minimum. Backing them up is a public opinion which recognizes more clearly than ever before the threat of forest fires to individual and community welfare.

The California State Automobile Association is taking an active part in this effort to meet the forest fire problem. Support of forest fire prevention and control is one of the established policies of the automobile association. Other related policies of the association are also involved, namely, the protection and perpetuation of California's scenic areas and the development of motor travel and removal of barriers to its growth.

One of the recent activities of the automobile association was to distribute, in conjunction with the Stop Forest Fires Committee of California, an enlightened study of the effect of forest fires on tourist travel. This study was sento to every official hotel, garage and emergency road service station of the association. The purpose of distributing the study was to support a statewide movement of the Stop Forest Fires Committee for the organization of a special committee with one leader in each county to direct the fight against incendiarism. E. B. DeGolia, president of the automobile association, is chairman of this special committee.

Here are some of the highlights of the study, which was compiled by T. L .Stanley, general manager of the Sierra-Cascade Wonderland Association:

For five weeks last summer one of the important state highways had a loss of 50 per cent in travel because a forest fire had blocked the road for only three days. Fear of being drafted to fight fire, a thing that is seldom done except in extreme emergency, together with a desire to avoid a smoke covered area, kept travel away.

On this same highway the records of gas stations, restaurants, and other businesses serving the motor traveler showed trade to be 10 per cent above normal on September 11. On that day several forest fires broke out. By September 15 business had dropped to 50 percent below normal. There it remained until September 18, when one of the fires was reported out and the others under control. But it was not until September 24 that business again returned to normal.

One hotel in that area had 65 guests registered on Sept. 11. After the fires started registration dropped until Sept. 16, when there were only 10 guests remaining. Not until Sept. 25 did registrations rise to where they were before the fires.

A resort in Trinity county suffered a 60 percent loss of trade for three weeks last summer, while forest fires burned 35 miles away in Trinity national forest.

These facts are typical of the inroads that forest fires make on California's tourist and vacation travel income. They sound a call to all Californians to take an active part in meeting the problem by a few simple but vitally necessary measures—to be careful in disposing of burning matches and tobacco and in handling campfires; and to firmly support the efforts of federal, state and county officers in the speedy application and just punishment of those responsible for fires, and for a more vigorous and strict enforcement of the fire laws.

Clerk in Dime Store: "You can have anything in here for a dime."
Customer: "I'll take that little blonde over there."

MANY FISH EGGS BEING HATCHED BY STATE

With the trout egg gathering season just ended, hatching of eggs in full blast, and planting of fingerlings underway, it is expected more game fish will be planted in the lakes and streams of California this year than have been turned loose for many years.

The state fish and game commission reports the gathering of rainbow, steelhead, cutthroat, large lake and black trout eggs netted 18,177,590. With the harvesting, earlier in the season of 19,258,892 Loch Leven, German brown and eastern brook eggs, a grand total of 38,034,772 trout eggs were delivered to the state hatcheries up to May 31.

Rainbow led the field with 11,784,390 eggs. Steelhead eggs to the number of 5,005,100 were gathered during the season, an increase over former years. Much attention is being given to the development of this desirable game fish.

Over 1,000,000 young trout have been planted in California waters up to May 31. The 28 hatcheries scattered through the state now have on hand eggs and young trout totaling 35,126,113. As soon as the fish have grown to the proper size they will be taken to the streams and lakes and released.

With a plant of over 16,000,000 salmon this year, fish planted in fresh waters of this state will come close to 55,000,000 for the year.

GOLD EXODUS END SEEN IN REPORTS

The Republican convention at Chicago has come and gone and while President Hoover and Vice-president Curtis were renominated, there were several problems upon which no action was taken due to the political dangers invovled. The stock market apparently gave little attention to the political developments from that source and during most of the week, prices moved within a definitely defined trading area. Quiet strength was noticeable in most groups. The sudden drop of 2c a bushel in wheat carrying the July position in that commodity to a new net low at 48c a bushel, only brought a limited amount of selling into the stock market toward the close of the week. Cotton dipped lower after early firmness. Sugar, after 12 days of rise, also joined the down turn.

In the past few days it has become clear that the heavy drain on our gold stocks from European sources had definitely ended. The dollar has had an almost sensational advance against continental currencies. A reverse flow of gold is not improbable within a comparatively short time. Drying up of the export movement of gold, it is felt, has disposed of the doubt which existed last month as to this country's possibility to keep the dollar tied to a gold basis. Tus far, we have lost $350,000,000 in gold. On June 8 last, American gold stocks were reported at approximately $3,979,000,000. Due to the loss of gold during April and May, the easy money policy of the Federal Reserve was largely nullified. The Federal Reserve bought government issues to build up bank reserves, but the results were rendered negative by constant quantity losses of gold. U. S. Government obligations were strong and active, thereby showing that any uneasiness over the bonus measure being enacted despite its passage a few days ago by the House and subsequent defeat by the Senate, was groundless. Adjournment of congress by June 27 is predicted, and a stock market, free from political influences, is likely to advance on technical grounds alone. There now appears a sizeable short interest. From the latter standpoint a rally of some duration may soon be reasonably expected.

OPENS ASSAY OFFICE IN AMADOR COUNTY

The M. & H. Engineering Company has opened an assay office in Jackson at which any type of assaying or ore analysis and all phases of metallurgical work and mill testing will be done. The company is fully prepared at present to start work, and intends to aid in every way the mining industry of the Mother Lode. The office is in charge of B. D. Harden and F. W. McQuiston, formerly connected with the Bradley interests in the Spanish mine.

WILD DUCKS ARE TO BE PLENTIFUL, IS FORECAST

While the wild duck question has become a matter of international concern, California seems to be favored by this favorite sport bird this year. Reports submitted to the state fish and game commission relative to nesting and hatching on the four state-owned refuges indicate the ducklings reared this season will exceed the output of any former year on the refuges.

At Los Banos, Gray Lodge at Gridley, and Joice Island near Suisun the mallards, various varieties of teal, sprig and spoonbills have utilized every desirable nesting place, and for the past few days the young birds have appeared each sundown in increasing numbers.

At the Imperial refuge on the Salton Sea, teal and tree ducks forsook their usual migratory tactics and settled down for the nesting season on the Colorado desert and the hatch has been heavy.

Every care is being given the ducks hatched on these areas, that they may be kept for further propagation, and encouraged to remain in the state instead of making their flights to more commonly used districts for nesting.

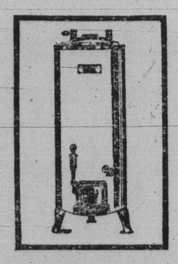
HOT WATER AND LOTS OF IT!

Polar bears may be able to keep clean in cold water, but who wants to be a polar bear? When it comes to a thorough job of behind the ears washing MY family scrubs with hot water.

Summer days are scrubbing days. Right now, too, is the busiest of scrubbing times for Mothers, with schools having vacation and young folks busy playing hard, getting smudged and enjoying it. They stand for being cleaned-up better when hot water is used and results of course are better too.

Modern mothers to find Automatic Water Heaters as helpful to the 150 daily tasks that are accomplished easier and better when hot water puts soap to work at full efficiency. Tea kettles, waterbacks, and old-fashioned heaters that must be lighted with a match are quickly being made obsolete by the Automatic Hot Water Heater.

These new Automatics are colorful and modern in appearance. Water is heated within a thickly insulated tank and kept hot by automatic thermostat control. By this means hot water is always instantly available at any hour of the day or night.



Keep up with the times. See these new Automatic Water Heaters at your local dealer's store or at the local office of the Pacific Gas and Electric Company. An Automatic Water Heater is not costly to buy and is the most economical to operate.

LEGAL NOTICE

NOTICE OF TRUSTEES' SALE UNDER DEED OF TRUST

WHEREAS, Amanda J. Rapp, on August 21, 1915, executed and delivered her certain Deed of Trust to F. D. Philips and George K. Rogers, as trustees, for the benefit and security of the California Prudential Society, a corporation, to secure the payment of a promissory note in the sum of $800.00, with interest thereon, which said Deed of Trust was recorded, in the office of the county recorder of the County of Nevada, State of California, Volume 1 of Trust Deeds, at page 449, et seq. Nevada County Records; and,

WHEREAS, the said promissory note, together with interest thereon, for value received, thereafter and before due, to wit, December 1st, 1915, was duly assigned by said beneficiary thereof to the Union Home Builders, a Trust Estate, together with all their rights, title and interest in and to the said Deed of Trust, securing said promissory note; and,

WHEREAS, the said promissory note, together with interest thereon, for value received, thereafter and before due, was duly assigned by said Union Home Builders, a Trust Estate, to the Merger Securities, Inc., a Delaware Corporation, together with all its rights, title and interest in and to the said Deed of Trust, securing said promissory note; and,

WHEREAS, the said Merger Securities, Inc., as assignee beneficiary under said Deed of Trust, on October 5, 1931, recorded a Notice of Default and Breach and Election to Sell, under said Deed of Trust, in Book 12 of Official Records, page 93 et seq., thereof, of Records of Nevada County, State of California; and,

WHEREAS, the said Merger Securities, Inc., pursuant to said Notice of Default and Breach of Election to Sell, under said Deed of Trust, as the owner and holder of said promissory note, secured by said Deed of Trust, after repeated demands for payment of said note and interest thereon, has elected to sell the real estate in said Deed of Trust described, to satisfy said indebtedness; said real estate is more particularly described as follows, to wit:

All that portion of Lot No. Four (4), in Block No. Fifty-two (52), of the City of Nevada, as said lot and block are designated upon the Official Map of said City of Nevada, made by H. S. Bradley, in the year 1869, described as follows, viz:

Commencing at a point on the westerly line of Sacramento Street, 93 feet northeasterly from the northeasterly corner of Lot No. 5, in said Block No. 52, (said Lot No. 5 in Block No. 52, formerly owned by J. D. Fleming); thence northwesterly at right angles to the westerly line of Sacramento Street, to the center of Deer Creek; thence northeasterly along the center of Deer Creek a distance of 45 feet; thence southeasterly to a point on the westerly line of Sacramento Street 45 feet northeasterly of the place of beginning; thence southwesterly along the westerly line of Sacramento Street, 45 feet to the place of beginning, all in Nevada County, State of California; and the said Merger Securities, Inc., a corporation, does hereby give notice that on Tuesday, the 16th day of August, 1932, at the hour of 10:30 o'clock A.M. of said day, at the Front Door of the Court House, in the City of Nevada, County of Nevada, State of California, it will sell, at Public Auction, to the highest bidder, for cash, in hand, in lawful money of the United States of America, all that certain real property hereinbefore last described.

TERMS OF SALE, cash in hand at drop of hammer; and the said owner and holder of said note, or any person ,may purchase at said sale.

Dated July 18, 1932.

RAIL CROSSING SIGNALS SAFETY REPORT SUBJECT

"Wait When Wig-Wags Warn." With this phrase adopted as a slogan, a statewide campaign is being conducted by the California committee on public safety to instill in motorists a more careful regard for warning signals at railroad crossings. The subject was chosen as a timely one in view of the increased volume of vacation travel and the fact that large numbers of motorists are traveling routes presenting new and unfamiliar conditions. A statement of the committee announcing the campaign declares that strict observance of wig-wags and other rail crossing warning devices is necessary if grade crossing accidents and their toll of deaths and injuries are to be reduced. It is also pointed out that railways and interurban lines are running on vacation schedules in many instances, resulting in the more frequent passage of trains.

Educational and other efforts will be carried on throughout the month with the object of impressing motorists with the necessity for careful driving and alertness in traversing railroad crossings.

The committee quotes from the California law in regard to this: Whenever any person driving a vehicle approaches a highway and interurban electric or steam railway grade crossing and a human flagman or a clearly visible electrical or mechanical signal gives warning of the immediate approach of a railway train or car, it shall be unlawful for the driver of the vehicle to fail to bring the vehicle to a complete stop within 50 feet but not less than 10 feet of the nearest railway tracks before traversing such grade crossing. It shall be unlawful for the driver of a vehicle to traverse a grade crossing when a human flagsignal of the approach or passage of a railway train or car."

Postal Birthday Commemorated—
The honoring of the 157th anniversary of the establishment of the federal post office system by George Washington was fittingly observed in Nevada City Tuesday. Postmaster Scadden had a fine portrait of Washington draped with the American flag and beside it a beautiful bouquet of gladiolas.

A chiropractor is a guy who gets paid for what an ordinary guy would get slapped for.

Him: "Do you know the secret of being popular?"
Her: "Yes—But mother says I mustn't."

THE AGE-OLD LURE

The search for the Golden Fleece never loses its glamor but that fact, writes Frederic Haskin, is not only one to justify an opinion that a most promising field for the numerous groups of young mining men is that in which the yellow metal hides.

Men always have sought gold but perhaps never before in history has the search been so avid and the need so keen. Not only do individuals desire gold in the personal sense; nations, governments require it, not as gold per se, but as the metallic foundation of credit and currencies.

Some of the greatest trading nations of the world have been forced to suspend the gold standard to the confusion of business. The gold supplies of the world have become maladjusted, are concentrated in a comparatively few spots. The extent of the free gold market which, before the World War had ben almost world wide, has been seriously curtailed. Men and nations cry for gold in order that they may have in hand the medium which will free the wheels of industry and release the bonds of trade.

Another reason why gold mining beckons as never before is that it hase become more profitable. When the world price level sinks, the purchasing power of gold rises. During the 1920-30 decade, many mines capable of producing gold were abandoned. Wages were high and also the cost of mining machinery and transportation. An ounce of gold recovered would only pay one day's expenses. Now wages and all other items are down 50 per cent or more. Gold remains standard, however, so the same ounce will pay for two or more days of mining costs. Therefore, it becomes profitable to work mines which had gone into the discard. Moreover, it has become increasingly important to find new sources. Companies can better afford to hire engineers to make surveys, if there is a prospect of finding gold, than they could when the cost level was high.

All these circumstances conspire to give the young mining engineer his opportunity provided he can attach himself to the gold search. Furthermore, no mining enterprise in the world holds out more opportunity of high adventture and ultimate great reward.—Oakland Tribune.

NEWSPAPERS

The following is a circular letter sent out by the advertising department of the J. C. Penney Company to its branch managers all over the United StSates:

"1. Do you want to be certain of reader interest? Then use the newspapers. Many a circular receives only a casual glance, while the local newspaper with hundreds of general nws items is read thoroughly from first to last page.

"2. Do you want representation in the same shopping window as the other merchants of your town uses? Then use the local newspaper. Women, the purchasing agents of the home, read newspaper advertising consistently, whereas many a circular is tossed into the waste basket without a glance.

"3. Do you want fast action? Then use the newspaper. The ad that you run today, if it contains real merchandising news, will bring immediate results tomorrow. You can receive and sell out a consignment of merchandise with newspaper advertising in less time than it takes to prepare a circular.

"4. Do you want to be recognized as a factor of importance in your community—a real home-town store? If you do, use the newspaper—it undoubtedly is a strong factor in the building of good will and acceptance by the whole town as a good place to trade."

Congress wanted the bonus army to go home so badly that it had to set the ex-soldiers a good example.

NEWS IN BRIEF

Born—To Mr. and Mrs. Howard Murley of Taft, a son, July 20. Mr. Murley was born and reared in Nevada City.

Old Building Remodeled—Mr. and Mrs. Albert Haddy had a barn on the back of their property that was in excellent condition and they are now remodeling it into a neat little bungalow. They have put in a bay window in front and added other windows.

Kellogg Krebs, who is in the metallurgical division of the American Cyanamid & Chemical Corp., is in our district doing test work at the Idaho-Maryland and other mining properties in this section.

Congressman and Mrs. Harry L. Englebright and son, Jackson, are expected home from Washington, D. C., within the next few days. They have been in Washington since last fall, the session of congress being longer than usual.

Will Fenton, who owns mining ground in the Quaker Hill district, is in Nevada City visiting his sister, Miss M. Fenton.

Frank Barr Dies—Funeral services were held Saturday afternoon for the late Frank Barr, who passed away in Stockton. He was born on Gold Flat in 1865 and after finishing grammar and high schools engaged in various occupations. Mr. Barr was a highly respected citizen. Two sisters survive, Mrs. S. E. Monk of Sacramento and Mrs. Alice Erskine of Roseville.

Return to Nevada City—Mr. and Mrs. Jay Roberts and family, who left Nevada City four years ago to make their home in Washington, have returned. Mr. Roberts is connected with the forest service.

C. E. Clinch, prominent business man of Grass Valley, was a caller at the Nugget office Wednesday.

JEWELERS
Grass Valley, Calif.

GOLD IN THE HILLS

The following editorial in the San Francisco Examiner is timely:

"The San Francisco Chamber of Commerce has joined in the movement to stimulate gold mining in California. Or rather, the chamber is acting to link this city with the spontaneous revival of mining. In the Mother Lode, where the deep mines drop down toward the Antipodes, there has been unprecedented activity this year and the mining towns are giving the lie to depression. Along the old placer river beds, with their picturesque names, the cradles are rocking nuggets.

"Among the causes of the financial difficulties of this period is a lack of gold. The big mining companies and the amateurs with pick and shovel and pan are doing what they can to fill the void. Every glint of 'color' will help somewhat."

Another bad thing about the new 3-cent postage is that it now costs more to write home for money.

Prohibition has proven a failure in practically all respects, but failures do not always teach a lesson that is heeded. When our personal habits are legislated against we immediately rise up and do just the opposite even though we are breaking the law of man.

Doing nothing takes up about twice as much time as doing something, and talking about what you have accomplished takes good time away from constructive effort.
